

SIMPRO GROUP | SE ENABLEMENT | LIGHTNING

Lightning

SE Demo Talk Track

Every module. One conversation. JustAsk anchors all of it.

Simpro Group | SE Enablement | April 2026 | Confidential

Before You Start

You are supporting a Specialist on a Lightning upsell conversation with an existing Simpro customer. The AM owns the customer relationship. The Specialist owns the conversation. Your job is to own the demo and the technical credibility behind it.

Think of this exactly like supporting an AE on an NCA deal. The Specialist sets up the conversation. You make the capability real. Together you close the gap between what the customer has today and what Lightning gives them.

One non-negotiable: JustAsk leads every Lightning conversation. It is the cornerstone of everything Lightning does and it is the fastest yes you will get. Every other module builds on the credibility JustAsk establishes. You can skip or abbreviate any other module based on what the shop actually runs. You do not skip JustAsk.

The framework is simple. Surface the pain. Show the solution. Land the value. Every module below follows that structure.

Module 1: JustAsk

The Cornerstone - Lead With This. Every Conversation.

SETUP

"Before I show you anything, let me name three things that every shop owner I talk to wants to know about their business - but cannot get out of their system today. Tell me if any of these sound familiar."

Say these three out loud, slowly:

"Which of my techs is costing me money on callbacks?"

"Which job types are actually making me money - and which ones are just keeping me busy?"

"Which customers have outstanding invoices and are still getting scheduled for new work?"

Stop. Let them react. Almost every owner will respond to at least one of those - usually all three. That reaction is your entry point. You are not asking them to think of a question. You are handing them questions they already have.

Then say: "Let me show you what happens when your system can answer all three of those - in plain English, in about 10 seconds each."

SHOW

Open JustAsk. Type each question. Show the answer. Do not rush.

- "Which tech has the highest callback rate this quarter?"
- "What are my most and least profitable job types this quarter?"
- "Which customers have outstanding invoices and open scheduled jobs?"

SE NOTE: Find the specific question that makes them go quiet. That question is their close.

TELL

"Every job, every invoice, every hour a tech spends on site - it all lives inside Simpro. You have been building that data for years. The problem is it has always been locked behind reports that take time to run, or a CFO you do not have, or a BI tool nobody bought.

JustAsk unlocks all of it. Plain English in. Answer out. No report. No analyst. No middleman.

The average trade business runs at 6% net profit. The ones that actually know their numbers - in real time, by job type, by tech, by customer - run at 24%. That gap is not effort. It is knowing where your business actually stands."

VALUE ANCHOR

"If you do nothing else with Lightning, JustAsk alone pays for the upgrade. Trade owners spend 5 to 10 hours a week chasing answers that are already in their system. That time is yours back - starting Monday."

Module 2: FieldReady

Training Agent - Before the Job

READ THE ROOM

FieldReady lands for shops with turnover, inconsistent quality across the team, or no dedicated trainer. If the shop is stable and small and the owner trains everyone personally - acknowledge the capability and move on. Do not sell a pain that does not exist.

SETUP

"When you bring on a new tech - how long before they are really performing? Not just showing up, but doing it the way your best person does it."

TELL

"Every tech on your team learned the process differently. Some were trained by you, some by a senior tech, some figured it out on their own. It is like a telephone game - by the time it gets to the fifth person, it barely resembles what you intended.

FieldReady creates one standard across your whole team. Every tech, same process, every time. New hire or ten-year veteran. That consistency is what starts turning your data into something you can actually rely on."

SHOW

Show FieldReady from the tech's perspective - what a new hire sees when they log in. Show that it is specific to how this shop operates, not generic content. Show the on-demand nature - a tech pulls this up before their first job with no trainer required.

***SE NOTE:** If sandbox access to FieldReady is limited, anchor to the VALUE ANCHOR. Do not apologize for sandbox state.*

VALUE ANCHOR

"Good techs are hard to find. When you do find one, the last thing you want is to lose them because nobody had time to train them properly. FieldReady makes sure every new tech gets the same onboarding - without pulling your best people off the tools to do it. And when you factor in that replacing one tech costs between \$15,000 and \$25,000 - that is a number worth protecting."

Module 3: JobReady

Job Preparation Agent - Before the Job

READ THE ROOM

JobReady is near-universal. The prep gap exists in almost every shop.

SETUP

"When a tech leaves for a job in the morning - what do they actually know about what they are walking into?"

TELL

"Your techs have everything they need in Simpro before a job. JobReady pulls all of it together automatically - job history, site details, customer notes, parts data - and puts it in one briefing before they leave. Your tech knows what to fix, what to bring, and what happened last time before they knock on the door. Nothing to click through. Nothing left out."

SHOW

Show the pre-dispatch briefing on mobile. One screen. Walk through what the tech sees - job history, site notes, parts, customer context. All pulled automatically from what is already in Simpro.

SE NOTE: *Connect this to what the customer already knows about the Simpro mobile app and job card. JobReady is making data that already lives in Simpro automatic - not creating new data. This is a surfacing problem, not a data problem.*

VALUE ANCHOR

"Every second trip costs you a truck, a tech, and a customer who is now wondering why you did not get it right the first time. Good techs do not need second trips - they need the right information before the first one."

Module 4: JobScribe

Documentation Agent - On the Job

READ THE ROOM

JobScribe is high-value where billing disputes are recurring, invoice delays are caused by missing notes, or office staff are chasing techs for information. It lands softer in very small shops where the owner is on every job.

SETUP

"After a tech finishes a job and drives back - what do the notes look like?"

TELL

"Techs hate paperwork. Always have. The job is done, they want to get to the next one. So notes are incomplete, rushed, or do not get written at all. Then the office has to chase, or the invoice goes out with gaps, and the customer disputes it.

JobScribe removes the manual notes step. The tech talks - describes what they did, what they found, what was used - and the system captures and transcribes it in real time. Clean, professional documentation. Automatically."

SHOW

Show the voice capture workflow on mobile. Show the output - the professional job record that auto-generates from what the tech said on site combined with the job plan.

SE NOTE: *Be honest about the workflow: JobScribe requires the tech to speak clearly about what they did. Set that expectation. The tech needs to use it correctly for the output to be clean.*

VALUE ANCHOR

"Incomplete documentation drives billing disputes. JobScribe gives every job a complete, professional record - without asking your tech to do anything they were not already going to do."

Module 5: JobBrief

Customer Summary Agent - After the Job

READ THE ROOM

JobBrief lands hardest for commercial shops where customers expect professional post-job communication, or where billing disputes and slow payment are recurring. For residential shops the framing still holds - adjust accordingly.

SETUP

"After a job is done - what does the customer actually receive?"

TELL

"The job ends. The tech drives away. For a residential customer that means an angry call - "What did your guy even do?" For a commercial customer it is worse - the facilities manager has to justify that spend to a property owner, a tenant, a CFO. If all they have is an invoice with a dollar amount, that conversation is hard.

JobBrief sends a professional summary automatically after every job. What was done. What was found. What is next. The residential customer stops wondering. The facilities manager has everything they need to justify the spend without picking up the phone and calling you."

SHOW

Show the JobBrief output - what the customer actually receives. Professional format. Auto-generated from what was captured on site.

***SE NOTE:** For commercial maintenance shops: connect JobBrief to contract retention explicitly. Post-job communication is one of the few things an owner can control that directly affects whether a commercial customer renews.*

VALUE ANCHOR

"You are not just making your customer's life easier - you are making them look good in front of their boss. That is the kind of service that keeps a commercial contract. And for residential, it is the kind of service that gets you a referral."

Module 6: Two-Way Messaging + GPS Time Tracking

Platform Features - Built In, Always On

These are not agents. They are platform features that ship with Lightning. They close the conversation, they do not open it.

Two-Way Messaging

SETUP

"How do you currently communicate with customers on the day of a job - confirmations, ETAs, that kind of thing?"

TELL + VALUE ANCHOR

"Two-Way Messaging automates your customer communication. Confirmations, ETAs, follow-ups - sent automatically, logged centrally. The customer always knows what is happening. The office stops making calls one by one."

GPS Time Tracking

SETUP

"How are your techs logging their time right now?"

TELL + VALUE ANCHOR

"GPS Time Tracking means the clock starts when your tech arrives on site and stops when they leave. No timesheets. No end of day memory test. No disputes on T&M; jobs. The time is what it is - verified, accurate, done."

The Close

Every Lightning conversation ends on JustAsk. Strip everything else away. Come back to where you started.

"Everything we just showed you - the training, the prep, the documentation, the customer summary - all of that data flows back into Simpro. And JustAsk sits on top of all of it. The more your team uses these tools the right way, the smarter your answers get. That is the compounding value of Lightning."

The Value

"Think about what we just walked through. A trainer for your techs. A job planner before every dispatch. A documentation specialist on every job. A customer communications function after every job. And a business intelligence layer that answers any question you have about your operation in plain English.

Those are five full-time roles that most shops could never afford to hire. Lightning puts all five on your payroll."

Objection Handling

Five objections. Punchy answers. Do not over-explain.

"Why am I paying more for something I already have?"

"You are not paying more for what you have. You are adding five roles to your team that you have never been able to afford. That is what Lightning is."

"I'll wait and upgrade later."

"Every day you wait is another job that goes out without a briefing, another job that closes without a customer summary. For residential that is a missed opportunity to build trust. For commercial that is a missed opportunity to strengthen the contract relationship. That does not come back."

"I'm not an AI person. I don't get it."

"You do not need to be. Your tech shows up knowing what to fix and what to bring. The notes write themselves when the job is done. Your customer gets a summary without anyone lifting a finger. That is not AI - that is just your business running better."

"Can I just buy the agents I want?"

"The agents all run on the same brain and feed from the same data. Take one out and the chain is not as strong. The value is in all of it working together."

"What's coming next?"

"More agents are on the way - procurement, scheduling optimization, virtual CSR for inbound calls, and more. All included in the Lightning upgrade as they ship."
