

Lightning

Sellers Kit

For Account Managers and Specialists

Lightning gives your FSM a brain - and the brain changes everything.
This kit has everything you need to pitch, prove value, and close.

SECTION 1

The Pitch

SECTION 2

Agent by Agent

SECTION 3

Objections
& Close

SECTION 1

The Pitch

Start here. Gate 1 closes most deals. Gate 2 closes the rest.

“ These agents replace roles your business has never been able to afford — at a fraction of what a hire would cost.

Why wouldn't you want to increase your margin by using them?

\$200K

of capability for ~\$2000/year (calc. the customer value)

That's not software pricing. That's a headcount argument.

6% → 24%

Net profit. Same industry. Same hours.

The gap is execution capacity — Lightning closes it.

Day One

Agents on the clock. No migration.

Nothing to learn. Already connected to your data.

IF THEY PUSH BACK: Move to Gate 2 — open discovery, build the value case, handle objections. Everything else in this kit is your backup.

How to Sell Lightning

Two gates. Most deals close at Gate 1. Gate 2 is your backup — not your default.

GATE 1

The Simple Pitch

Lead here. Stop talking. Let them react.

“Lightning gives your business a team of AI agents that do the work you’ve never been able to staff for — at a fraction of the cost of a hire.

Why wouldn’t you want to increase your margin by using them?”

Then stop. Let them respond.

✓ Open → move straight to discovery & close

pushback →

GATE 2

The Full Value Case

Only if Gate 1 gets pushback.

- 1 Open with trigger-based discovery
- 2 Walk the 27 functions gap — 6% to 24%
- 3 Introduce Heart + Brain architecture
- 4 Build ROI case — use agent pages in Section 2
- 5 Handle objections with approved reframes
- 6 Close on JustAsk. Always.

✓ Use slides in Section 2 and Section 3

Heart + Brain: The Architecture That Changes Everything

♥ THE HEART

Simpro / AroFlo / BigChange

Best-in-class field service management. Jobs scheduled. Techs dispatched. Invoices generated. It doesn't go away. It gets dramatically better.

"Your FSM is the heart. Lightning is the brain. Today, we're installing the brain."

🧠 THE BRAIN

Cooper, Lightning's AI Intelligence Layer

Cooper sits on top of the FSM. Learns your business. Gets smarter with every job.

How you talk to Cooper: JustAsk — ask your business any question in plain English. Get the answer in seconds.

What Cooper runs: 4 AI agents + 2 platform features — full-time roles, working day one.

⚡ Faster FSM

5× the features and bug fixes. Every month you're on Lightning, the heart improves faster than ever before.

👥 Digital Workforce

AI agents doing the 20 functions your margins never supported. Full-time roles. Working day one.

💬 JustAsk

Ask your business any question in plain English. Get the answer in seconds. No BI tool. No CFO required.

27 Functions. You're Only Doing 7 Well.

To hit 24% margins you need 27 functions executed well. Most businesses do 7 — not for lack of will, but lack of headcount. Every missing function is a hire they can't afford at 6% margins.

27

Functions needed

Scheduling, training, job prep, documentation, comms, time tracking, procurement, BI, and on and on.

7

Functions most do

Not because they don't know the others exist — because each one requires a dedicated hire they can't afford.

20

Functions Lightning fills

AI doesn't replace your people. It gives you the team you couldn't afford to hire. Starting day one.

ANCHOR 2:

"There are 27 things a profitable trade business does. Most operators are doing 7. Lightning gives you the rest."

What It Costs. Why It Wins.

THE NUMBER

15%

platform uplift on your existing subscription

3-year term · Standard list is 25% · 15% is the launch rate — expires May 31

CONTEXT: The average enterprise software vendor charges 15% per year just for routine price increases — no new capability. AI platforms are climbing 20–25% annually. Lightning customers pay about one normal year of price increase and get an entire AI brain with it.

⚡ PRICE LOCK GUARANTEE

Annual increases capped at
3% + in-country CPI

	Yr 1	Yr 2	3yr
Avg. enterprise SW	15%	15%	~52%
AI platforms	22%	22%	~82%
Lightning (locked)	5-7%	5-7%	~20%

ANCHOR 5:

"\$200,000 of operational capability for roughly \$2000 a year. That's not a software pricing argument. That's a headcount argument. And it wins every time."

SECTION 2

Agent by Agent

One agent can close the deal. Know each one cold.

FieldReady — Training & Onboarding Agent

Every tech performs like your best one. From day one.

THE PROBLEM

Training a new tech takes 10–30 hours. Turnover runs 25–30%. Most companies have no dedicated trainer. New hires show up, can't use the system, and critical data never gets entered.

THE MATH

41% of entry-level techs leave within 2 years without structured training. Replacing one tech costs \$15K–\$25K in recruiting, onboarding, and lost productivity. A full-time trainer costs \$60K–\$80K/year.

THE AGENT

FieldReady trains every tech on YOUR workflows, YOUR job data, YOUR system — on demand. New hires, veterans, everyone gets the same high standard, consistently. No trainer required.

THE RESULT

Competitors take 12–16 weeks to onboard. You do it in days. Stop losing \$15K–\$25K every time someone walks. Your whole team performs at the level of your best tech.

PITCH LINE: *"How much does it cost you every time a tech walks? FieldReady eliminates that — and it trains every tech to your standard, not YouTube's."*

JobReady — Job Preparation Agent

No tech shows up blind. No more return trips.

THE PROBLEM

Techs show up without knowing what was done last time, what parts they'll need, or what the customer expects. Most companies have no job prep function — it falls to the tech to figure it out on the way.

THE MATH

Industry average first-time fix rate: 75% — meaning 1 in 4 jobs needs a return visit. Each truck roll costs \$300–\$500. A 5,000-job business loses \$250K–\$625K/year to unnecessary return trips.

THE AGENT

JobReady auto-generates a complete job briefing before every dispatch — pulling full job history, customer notes, site details, and parts data. Your tech knows what to fix, what to bring, and what happened last time before they knock on the door.

THE RESULT

Push your first-time fix rate from 75% toward 90%+. Every 5-point gain eliminates hundreds of return trips and hundreds of thousands in annual bleed.

PITCH LINE: "What's your first-time fix rate right now? For every point below 90%, you're burning \$250K+ a year in return trips. JobReady closes that gap."

JobScribe — Documentation Agent

Tech talks. System writes. End of paperwork.

THE PROBLEM

Techs spend 30–60 minutes every day on paperwork. Notes get lost. When a customer asks "what did you do?" the answer is a scribbled work order they can't read. Disputes follow. Billables get missed.

THE MATH

Incomplete documentation drives 40% more billing disputes. At \$30/hr burdened rate, 45 min/day per tech = \$156K/year for a 10-tech crew. That's billable time walking out the door every single day.

THE AGENT

The tech talks. The system writes. Notes, parts, hazards, follow-ups — all captured by voice in real time. JobScribe combines what was planned with what was done and produces clean, professional reports automatically.

THE RESULT

Your techs reclaim 30–60 minutes a day for billable work. Billing disputes drop. Customers get professional documentation on every job. Cash comes in faster.

PITCH LINE: "How much time do your techs spend on paperwork after each job? Multiply that by your burdened rate — for a 10-person crew that's over \$150K a year. JobScribe gives them that time back."

JobBrief — Customer Summary Agent

Every customer. A professional brief. Every time.

THE PROBLEM

Job ends. Silence. The customer doesn't know what was done, what to watch for, or what's next. Then the angry call lands — "What did you even do?" — and the dispute begins. AR drags. Cash sits idle.

THE MATH

Proactive post-job comms cut billing disputes by 25–35% and accelerate payment by 15–20 days. On \$100K/month in AR, faster payment timing alone unlocks \$50K of trapped cash flow.

THE AGENT

JobBrief auto-generates a polished post-job customer brief after every job. What was done. What was found. What's next. Sent automatically. Logged to the job. No extra work for your team.

THE RESULT

Fewer disputes. Faster payments. Customers who feel genuinely taken care of — without you or your team doing a single extra thing. JobBrief runs after every job, every time.

PITCH LINE: "How often do you get a call from a customer asking what your tech actually did? Every one of those calls costs time and trust. JobBrief eliminates them — and gets you paid faster."

— Your Business. On Demand.

Ask any question in plain English. Get the answer in seconds. No reports. No BI tool. No CFO required.

"Which tech has the highest first-time fix rate?"

JustAsk. Instantly surface your top performers and understand exactly what separates them.

"What's my margin by job type this quarter?"

JustAsk. Know which jobs are making you money and which are quietly killing your margin.

"Which customers haven't paid me in 60 days?"

JustAsk. Stop chasing AR manually — see exactly where your cash is stuck.

"Which tech is costing me money?"

JustAsk. Stop guessing. Start managing with data that's always current.

JustAsk today answers your questions. Where it's heading: JustAsk takes action — reassign a tech, push a quote, run a follow-up campaign. All in plain English. If you do nothing else with Lightning, you'll get your money back on this alone.

SECTION 3

Objections & Close

Memorize these. Don't improvise. Everyone. Every call.

Handling Common Objections - AM and Specialists

Memorize these. Don't improvise. Everyone. Every call.

"Why am I paying more for something I already have?"

You're upgrading to the next generation of the platform. The brain makes your existing scheduling, invoicing, and reporting smarter from day one. On top of that, you get JustAsk and four AI agents — full-time roles you'd otherwise have to hire for. The 15% uplift is less than most vendors charge for a routine annual increase. And the Price Lock caps every future increase at 3% + CPI. The math wins. Every time.

PRO TIP: Lead with what they already paid for getting better. Then layer in what's new.

"I'll wait and upgrade later."

Two reasons not to. First: the brain starts learning the moment it turns on — businesses that upgrade first have six months of compounding intelligence baked in by November. Second: the 15% launch rate expires May 31 — standard is 25%. The AI tax is pushing the rest of the market up 20–25% a year. Lightning customers lock in at 3% + CPI for the full term. The longer you wait, the wider the gap, the higher the price.

PRO TIP: Never let 'later' land without a cost. Quantify the waiting.

"I'm not an AI person. I don't get it."

You don't need to be. Here's what changes Monday morning: your tech shows up knowing what to fix, what to bring, and what happened last time. Notes write themselves. The customer gets a professional summary. Timesheets are GPS-verified without anyone touching a button. And you can ask any business question in plain English and get an answer in seconds. That's not AI talk — that's fewer truck rolls, faster billing, and happier customers.

PRO TIP: Ground it in a Tuesday. Plumbers don't buy 'AI.' They buy fewer callback trips.

"Can I just buy the agents I want?"

The agents run on the brain. Without Lightning, there's no brain. Without the brain, each agent runs on external infrastructure — and you'd pay 3–5x the price piecemeal. Lightning is the foundation that makes every current and future agent affordable and integrated. That's why a 15% platform upgrade delivers what competitors charge hundreds per tech per month for.

PRO TIP: Don't apologize for the platform model. It's the reason the price is this low.

Handling the 3-Year Commitment

The brain needs time to learn. The Price Lock protects you while it does.

THE CANONICAL REFRAME

"The 3-year term isn't lock-in. It's the runway.

Lightning starts learning your business day one. Six months in, it knows your patterns. Eighteen months in, it knows your techs, your customers, your profitable jobs, your at-risk accounts. At 36 months, it's irreplaceable.

Pulling the brain out at 12 months isn't flexibility — it's a reset. You'd be throwing away the very thing you're paying for.

And while the brain is learning, the Price Lock is protecting you. Every other AI vendor is raising prices 20% a year. You're locked at CPI + 3%. So the 3 years isn't a cost. It's the structure that lets the brain mature and the math stay in your favour the whole time."

SHORT FORM

"The brain needs 3 years to embed into your business. In the meantime, your price is locked at CPI + 3% while the rest of the AI market goes up 20% a year. The term isn't a cost. It's the structure."

3-YEAR MATH

Avg. enterprise SW ~52%

AI platforms ~82%

Lightning (locked) ~20%

ANCHOR 6:

"While the rest of the AI market raises prices 20% a year, Lightning customers are locked at inflation plus 3%. You're protected from the AI tax — by design."

Going for the Close

Every close returns to JustAsk. Lead with math, land with imagination.

The JustAsk Close

"Forget the agents. Forget the messaging. Forget the time tracking. Imagine tomorrow being able to ask your business any question — in plain English — and get an answer. That's JustAsk. And it's only the start of what Lightning brings."

WHY IT WORKS: Strip everything back. Ends on imagination, not features. Easiest yes you'll get.

The Headcount Close

"\$200,000 of operational capability for roughly \$2000 a year. That's not a software argument. That's a headcount argument. And it wins every time."

WHY IT WORKS: Reframes the 15% uplift as the cost of hiring no one. Use when they push on price.

The Urgency Close

"Every week you wait is a week your competitors' brains are learning and yours isn't. The 15% rate expires May 31 — and the AI tax keeps climbing for everyone except Lightning customers."

WHY IT WORKS: Two urgency drivers: compounding intelligence lag + launch pricing window. Quantify, don't pressure.

The Summary Close

"You mentioned [pain 1] and [pain 2] — those are exactly what [agent] and JustAsk address. 15% uplift, Price Lock at 3% + CPI, brain starts learning day one. Shall I put the numbers together for your account this week?"

WHY IT WORKS: Mirror their own words back. Pain → solution → math → next step. All in 30 seconds.

The 7 Anchor Statements

Non-negotiable. Every call. Every presentation. Land at least one — verbatim.

1

"The average trade business earns 6% net profit. The businesses that run well earn 24%. The difference is not effort — it's execution capacity."

2

"There are 27 things a profitable trade business does. Most operators are doing 7. Lightning gives you the rest."

3

"The FSM is the heart of your business. Lightning is the brain. Today, we're installing that brain."

4

"You're getting the equivalent of 25 full-time employees — for the cost of less than one."

5

"\$200,000 of operational capability for roughly \$2000 a year. That's not a software pricing argument. That's a headcount argument. And it wins every time."

6

"While the rest of the AI market raises prices 20% a year, Lightning customers are locked at inflation plus 3%. You're protected from the AI tax — by design."

7

"The businesses that upgrade in May have a brain that's been learning their data for six months by November. The businesses that wait start at zero."

THE TEST: A 12-person plumbing shop gets it in 30 seconds. No jargon. No 'agentic AI.' The math is obvious. There's a reason to act now.
